

PHOTOGRAPHY

INTRODUCTION

Photography is the science, art, application and practice of creating durable images by recording light or other electromagnetic radiation, either electronically by means of an image sensor, or chemically by means of a light-sensitive material such as photographic film. Typically, a lens is used to focus the light reflected or emitted from objects into a real image on the light-sensitive surface inside a camera during a timed exposure. With an electronic image sensor, this produces an electrical charge at each pixel, which is electronically processed and stored in a digital image file for subsequent display or processing.

SKILL SET

- Editing skills
- Cataloging
- Digital Imaging
- Equipment Skills and Training
- Formating
- Imaging
- Visual

ELIGIBILITY

- 10+2 from any Stream
